HUMAN Bot Threat Assessment

Understand Threats Using a No-Code Bot Detection and Analysis Solution

HUMAN

Overview

In today's digital landscape, sophisticated bots significantly threaten your online assets. HUMAN Security's Bot Threat Assessment provides a powerful mechanism to identify and mitigate risks associated with malicious bots. Our advanced technology provides comprehensive insights into IP ranges and their associated threats, safeguarding your network from increasingly complex cyber threats.

Key Features

IP RANGE ANALYSIS (NO CODE)

Detailed Reporting: Obtain detailed reports on IP ranges associated with bot activities, including geolocation and risk levels.

Scan IP Ranges: Scan IP ranges for suspicious behavior and receive immediate alerts on potential threats.

THREAT INTELLIGENCE

Risk Scoring: Prioritize your response using the risk score based on historical data and current threat intelligence assigned to each IP range.

Behavioral Insights: Analyze patterns and behaviors of bots to understand their motives and tactics.

COMPREHENSIVE REPORTING

Actionable Intelligence: View automated threats that most vendors will overlook.

Actionable Insights: View detailed visualizations and summaries to inform security decisions and strategies.

INTEGRATION CAPABILITIES

Seamless Integration: Easily integrate with existing intelligence and/or data analytics platforms and workflows to enhance your overall threat management strategy.

Benefits

No Work Flow Interrupt: HUMAN can execute tasking with minimal customer input. Reporting available within 72 hours.

Enhanced Security Posture: Proactively defend against malicious bots and reduce the risk of data breaches and service disruptions.

Optimize Compliance: Ensure devices are operating in a known configuration state. Identify rogue device operation within a network.

Informed Decision-Making: Make data-driven decisions with comprehensive threat analysis and risk scoring.

Enhanced Visibility: Leverage net new telemetry to identify and define threats that current capabilities will miss.

How It Works

Bot Threat Assessment provides details on these fields

- Timestamp
- IP Address
- IP/UA Combo
- Device Model
- Risk Score
- Threat Category
- Country
- City
- Connection Type
- ASN
- ASO
- ISP
- Last seen date

Why HUMAN Security?

Proven Expertise
Leveraging years of experience and cutting-edge technology to provide industry-leading bot detection and threat assessment.

Comprehensive Solutions
Offering a full suite of security solutions designed to address the most pressing challenges in cybersecurity.

Dedicated Support
Our team of experts is available to provide support, guidance, and tailored solutions to meet your unique needs.
